

# Blockchain *Government Technology*

*Building the sovereign digital systems for nations.*

#### WHO WE ARE

Deca4 is a UAE-based **blockchain government technology specialist**. Our work spans **national identity, land and corporate registries, judicial infrastructure and sovereign settlement rails**, built for states, regulators and courts, and built so the government owns it.

TRUSTED BY GOVERNMENTS, REGULATORS AND COURTS

# Building the Digital Backbone of *Nations*

To move government onto a **blockchain system of record**: immutable, interoperable, verifiable by anyone.

## One record, every ministry

Processes that stop reconciling, and citizens who stop repeating themselves.

## Trust made verifiable

Proof any citizen, court, bank or counterparty can check for themselves.

## Markets unlocked

Title, equity and credit become assets that can move, finance and trade.

*We work closely with **Avalanche**, the leading blockchain protocol used by the US Government.*

WHERE WE ARE

# A proven UAE base, *going global*

## HOME BASE

### United Arab Emirates

Multiple sovereign systems live and in build, for a national regulator, a municipality, a court and a space venture.

## EXPANDING

Government engagements in progress across Africa and Europe, led by a global team.

Nigeria

Gambia

Botswana

Mozambique

Malawi

São Tomé

Kenya

Côte d'Ivoire

# TDRA · the *UAE Pass Digital Vault*

Deca4 is **upgrading and operating the blockchain** powering the UAE digital identity, the number one blockchain based digital identity government system in the world.

---

**11 million** citizens and residents

---

**200+** government entities connected

---

**150 million** government credentials secured

---

**The backbone** of UAE digital government

---

POWERING

## RAK · the *Tokenised Land Register*

The northern emirate of the UAE is building a **blockchain land and interim register** on its own sovereign chain. Deca4 is delivering the end to end tokenised system, allowing stablecoin settlement to the system of record.

---

**Sovereign Registered Assets (SRAs)**, issued by the government

---

**End to end** tokenised title, from registration to transfer

---

**Atomic settlement** of title deeds using stablecoins

---

**Off-plan escrow and approvals** enforced on chain

---

حكومة رأس الخيمة  
Government of Ras Al Khaimah

INTEGRATED WITH

# DIFC Courts · *justice on a public ledger*

Deca4 **built, operates and advises** the Dubai International Financial Centre Courts blockchain services, one of the most advanced courts globally and live in production today.

---

**Tejouri:** blockchain digital document vault

---

**The first** court enforced digital asset will, anywhere

---

**Digital notarisation** and court document attestation

---

**Pioneering** the Court's dispute resolution oracle

---

IN PRODUCTION

## Madari Space · *Proof of Space Storage*

Deca4 is working with Madari Space on the development of a **disaster recovery solution** leveraging space data centres and blockchain to ensure national records are securely backed up.

---

**A dedicated sovereign Layer 1** for orbital data custody

---

**Satellite-signed** custody attestations, on a schedule

---

**Point-in-time recovery** of any database, proven on chain

---

**Encrypted on the ground**, never readable in orbit

---

MISSION PARTNER

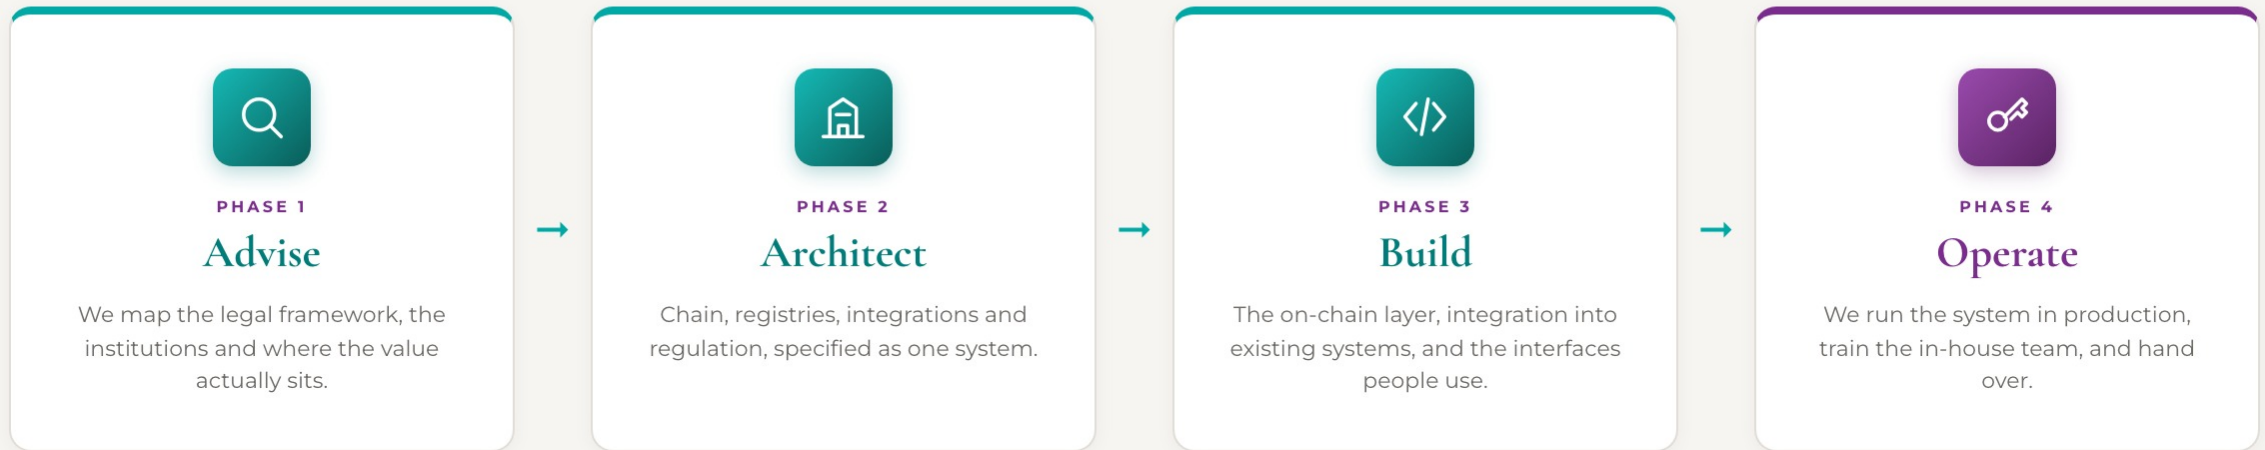

# One Foundation, *Five Verticals*

Each vertical can be developed independently on a blockchain foundation, with **benefits compounding as more layers are interconnected**.

## HOW WE WORK

# End to end, *from advisory to handover*

## ENGAGEMENTS ARE STRUCTURED ONE OF TWO WAYS

### MODEL A

#### Fixed-scope implementation

An agreed scope at a **capped price**. The government owns the system outright on delivery.

or

### MODEL B

#### Build, operate, transfer with revenue share

**No upfront cost to the state.** Deca4 shares in the fees the service earns, then transfers it.

*Advisory and embedded engineering run alongside either model, or on their own.*

LET'S CONNECT

# Thank *You*

*Moving governments onto blockchain systems of record,  
securing the digital backbones of nation states.*
